1. Overview

1.1 Overview

This application note describes the usage of the communications evaluation board for the RX72M, which allows you to evaluate LSI RX72M without requiring proprietary hardware on the user side.

This board includes the interfaces listed below for use in evaluating communications by the RX72M.

- EtherCAT®
- 10Base-T / 100Base-TX
- USB
- I2C (No connector installed)
- SPI (No connector installed)
- RS-485(No connector installed)
- CAN(No connector installed)
- JTAG
- General-purpose ports
- Others

1.2 Overall Block Diagram

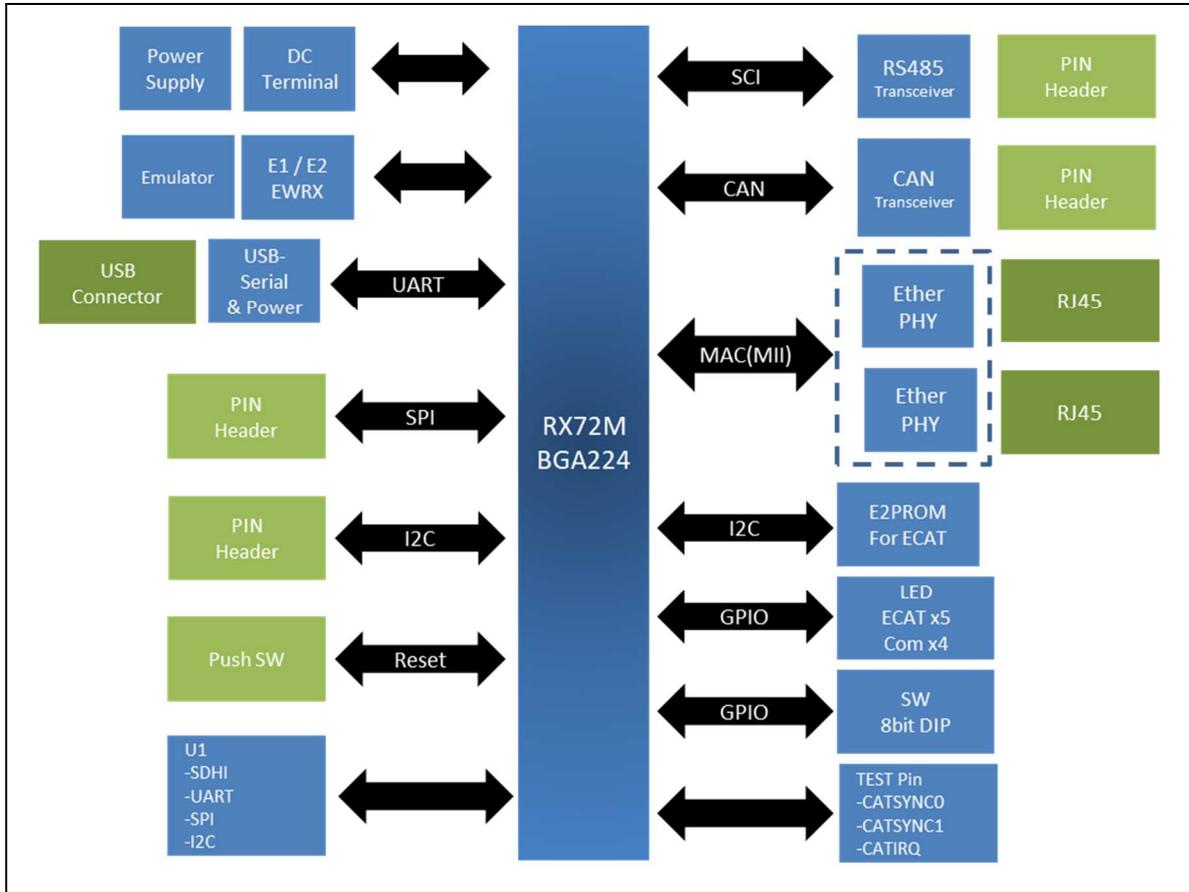

Figure 1.1 Overall Block Diagram

2. General Specifications

2.1 Electrical Specifications

This section gives the electrical and other specifications of this product in a set of tables.

Item		Specifications
Power supply	Rated voltage	DC 5 V
	Range of voltage tolerance	DC 4.75 V to 5.25 V
	Current drawn internally	100 mA or less
	Status LED (POWER)	Green

2.2 Environmental Specifications and Mass

Item		Specifications
Physical environment	Ambient temperature for operation	0 to 55°C
	Ambient temperature for storage	-25 to 70°C
	Ambient humidity for operation	30 to 90% RH (no condensation)
	Ambient humidity for storage	30 to 90% RH (no condensation)
	Atmosphere for operation	No corrosive gas
Mass	—	Approximately 150 g
Board dimensions	—	90 (W) × 52 (H) (not including protrusions)

2.3 Communications Specifications

Item	Specifications
Communications protocols	EtherCAT
Communications control IC	RX72M
EtherCAT PHY	KSZ8081 from Microchip
Communications method	IEEE 802.3u (100Base-TX)
Form of isolation	Pulse-transformer isolation
Status LEDs	RUN (green), ERR (red) L/A IN (green), L/A OUT (green) STAT (green/read)
External interfaces	RJ-45 × 2

3. Names and Functions of Parts

3.1 Clock

The RX72M system clock (24 MHz) is supplied by this board.

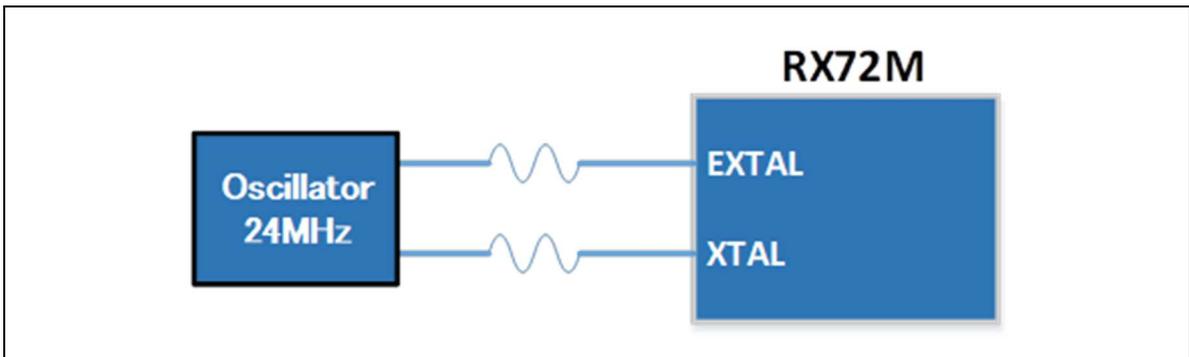

Figure 3.1 System clock supply

3.2 Communications Section

This communication board has a standard R-J45 connector, and possible to EtherCAT and Ethernet communication using this connector.

The image shows a green PCB with two gold-colored connectors highlighted by a red box. To the right of the image is a pinout table for the EtherCAT Communication connector (ECATIN, ECATOUT) IEEE802.3u. The table lists pins 1 through 8 and their corresponding functions: NC, NC, RXD-, NC, NC, RXD+, TXD-, and TXD+.

EtherCAT Communication connector (ECATIN, ECATOUT) IEEE802.3u

8	NC
7	NC
6	RXD-
5	NC
4	NC
3	RXD+
2	TXD-
1	TXD+

Conformity connector : RJ-45connector
 Conformity cable : Double shielded cable (Category 5)

EtherCAT
 Conformance tested

Figure 3.2 EtherCAT Communications Connectors

3.3 Power Supply and Peripheral Pins

5V DC power supply can be input through the USB to power the RX72M.

The POWER LED (green) lights up when 5.0V is being supplied.

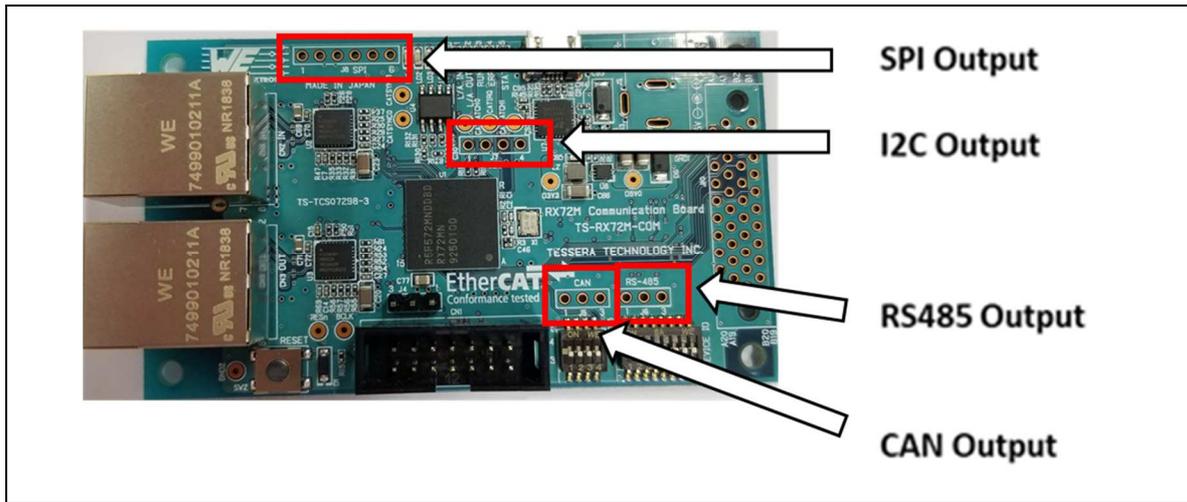

Figure 3.3 Power Supply and I/O Connectors

3.3.1 CAN I/F pins

These pins function as the pin headers for the CAN interface. Via the CAN Driver make the input and output of CANH/L.

Part No: WURTH 613 003 111 21(No connector installed)

Table 3.1 CAN I/F (J5)

Pin No.	I/O	Signal Name
1	I/O	CANH
2	I/O	CANL
3	—	GND

3.3.2 RS 485 I/F pins

These pins function as the pin headers for the RS-485 interface. Via the RS485 Driver make the input and output of Half duplex signals.

Part No: WURTH 613 003 111 21(No connector installed)

Table 3.2 RS485 I/F (J6)

Pin No.	I/O	Signal Name
1	Output	A
2	Output	B
3	—	GND

3.3.3 SPI I/F pins

These pins function as the pin headers for the SPI.

Part No: WURTH 613 006 111 21 (No connector installed)

Table 3.3 SPI I/F (J8)

Pin No.	I/O	Signal Name
1	—	+3.3V
2	Clocks	SPI_CLK
3	I/O	SPI_MOSI
4	I/O	SPI_MISO
5	I/O	SPI_SS_N
6	—	GND

3.3.4 I²C I/F pins

These pins function as the pin headers for the I²C.

Part No: WURTH 613 004 111 21 (No connector installed)

Table 3.4 I²C I/F (J7)

Pin No.	I/O	Signal Name
1	—	+3.3 V
2	SCL1	I2C_SDA
3	SDA1	I2C_SCL
4	—	GND

3.4 Status LEDs (EtherCAT)

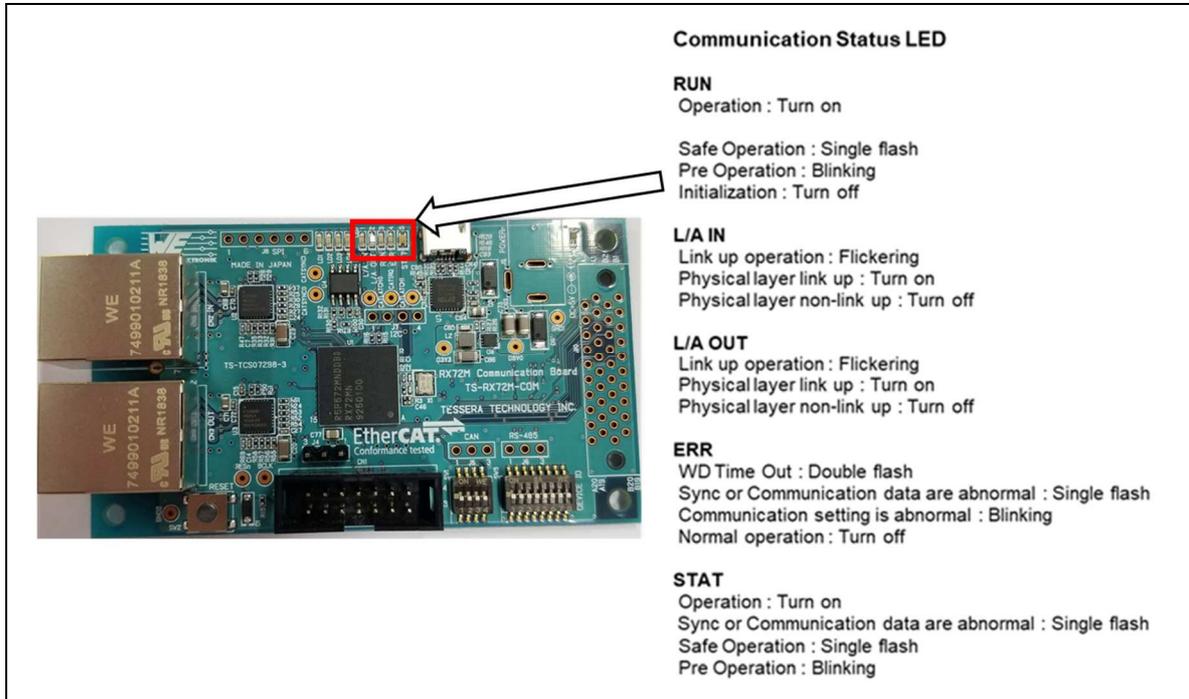

Figure 3.4 Communications Status LEDs

The EtherCAT slave controller (ESC) controls lighting of the status LEDs

Table 3.5 EtherCAT Status LEDs

Signal Name	I/O	Pin No.
CATLINKACT0	Output	LED1
CATLINKACT1	Output	LED2
CATLEDRUN	Output	LED3
CATLEDERR	Output	LED4
CATLEDSTER	Output	LED5

3.5 Power supply, General-Purpose LEDs

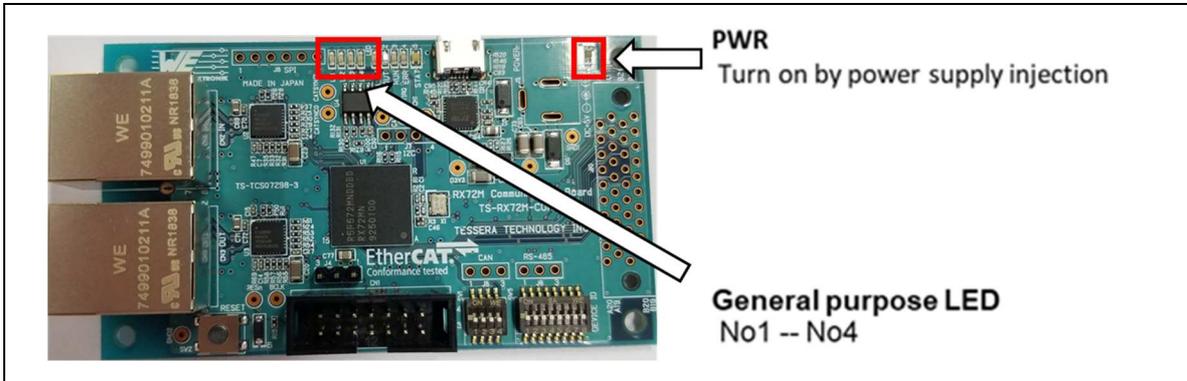

Figure 3.5 Power-Supply and General-Purpose LEDs

3.5.1 Power supply LEDs

The power for various devices is generated by the input of 5-V DC through a USB. When 5.0 V is supplied, the POWER_LED lights up in green.

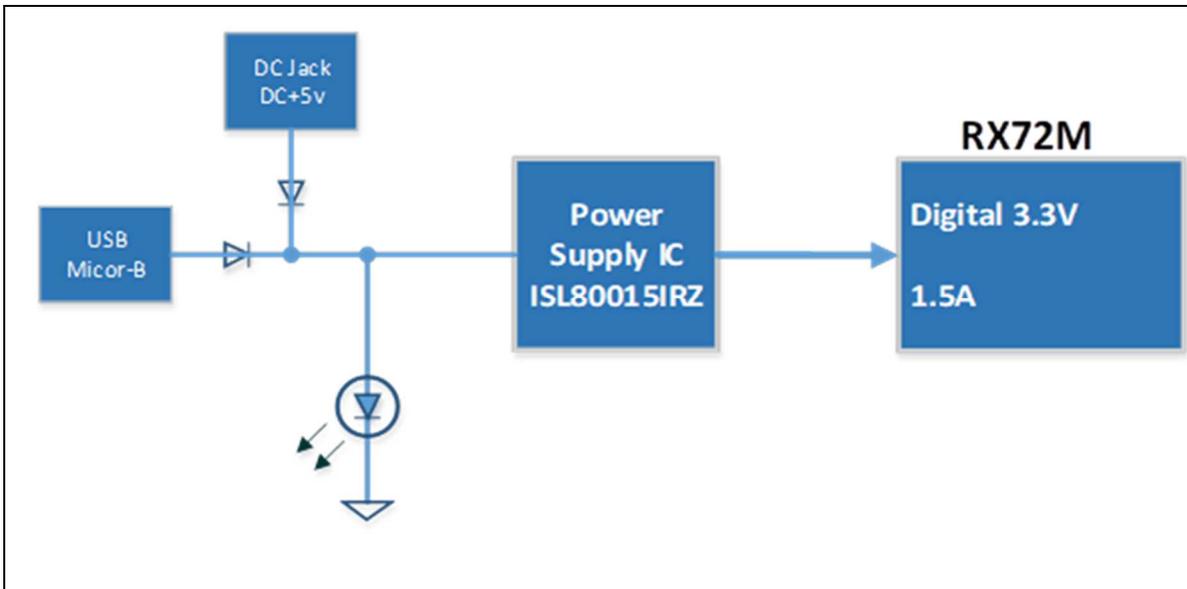

Figure 3.6 Power-Supply Connection

3.5.2 General-Purpose LEDs

It is an LED terminal that the user can arbitrarily use.

According to the protocol standard, green and red LEDs can be used.

Table 3.6 General-Purpose LEDs

Signal Name	I/O	Pin No.
P71	Output	LD1 (Green)
PH0	Output	LD2 (Red)
PN4	Output	LD3 (Green)
P85	Output	LD4 (Red)

3.6 DIP Switch Block

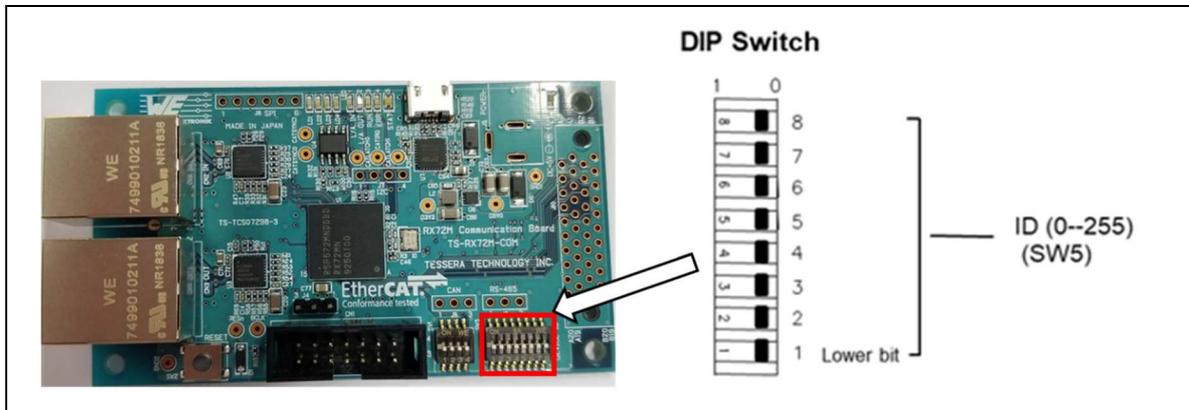

Figure 3.7 DIP Switch Block

The DIP switches of SW5 are used to set the node ID (0 to 255).

Table 3.7 DIP Switches (SW5)

Switch No.	Name of RX72M Signal	Function
SW5-1	PH2	ID SW0
SW5-2	P46	ID SW1
SW5-3	PQ3	ID SW2
SW5-4	P05	ID SW3
SW5-5	P72	ID SW4
SW5-6	P47	ID SW5
SW5-7	PC1	ID SW6
SW5-8	PN5	ID SW7

3.7 Connector for Debugging and Reset Switch

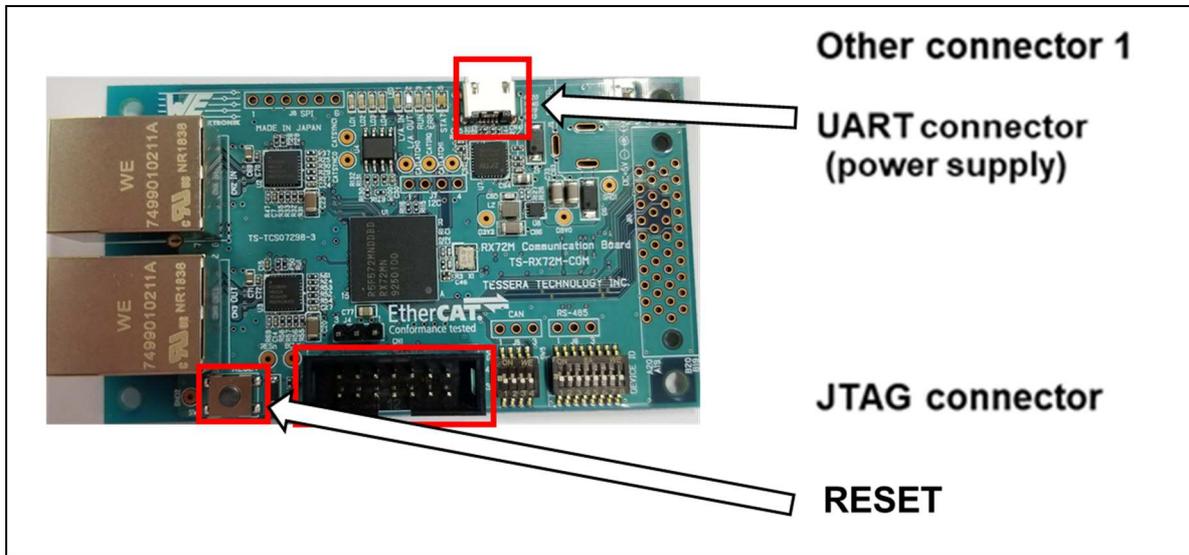

Figure 3.8 Push Switch and Other Connectors on the Board

3.7.1 Reset switch (SW2)

This push switch generates a reset of the RX72M and its I/O pins.

3.7.2 JTAG connector (CN1)

This is a inch-pitch connector having JTAG-14 pins for debugging.

Part No: WURTH 612 014 216 21 (Not mounted)

Table 3.8 JTAG (CN1)

Pin No.	Name of RX72M Signal	Pin No.	Name of RX72M Signal
1	TCK/FINEC	2	VSS
3	TRSTn	4	EMLE
5	TDO	6	-
7	MD/FINED	8	VCC
9	TMS	10	UB
11	TDI	12	VSS
13	RESn	14	VSS

3.7.3 UART connector (CN4)

This is a USB micro B type connector for the USB interface to be used as a UART. UART to USB conversion LSI (FT 232 RQ) is mounted on the communication board. The RX72M performs asynchronous communication with a PC by connecting a USB connector.

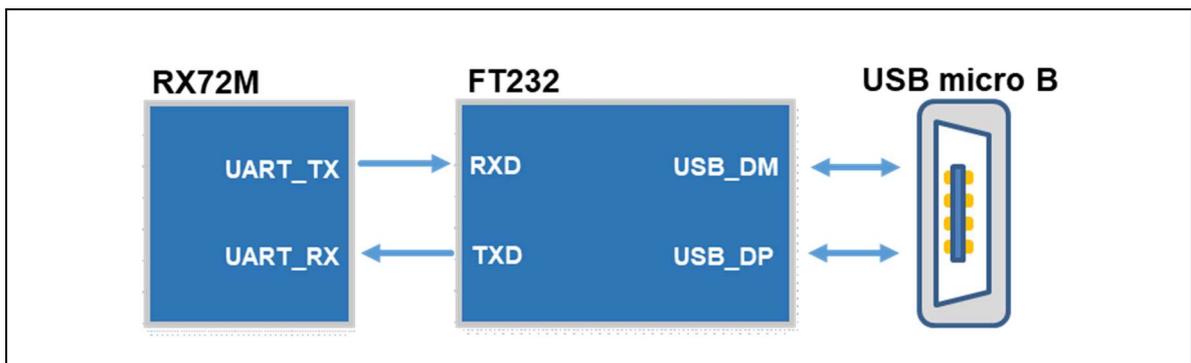

Figure 3.9 UART

Table 3.9 UART (CN4)

Pin No.	Signal Name
1	VBUS
2	-D
3	+D
4	ID
5	GND

3.8 Jumper Blocks (J4)

This jumper sets JATG Configuration mode.

Usually it is used at 2-3 short of jumper pin. To use the hot plug-in function, change it to 1-2 short and use it.

Part No: WURTH 613 003 111 21 (No connector installed)

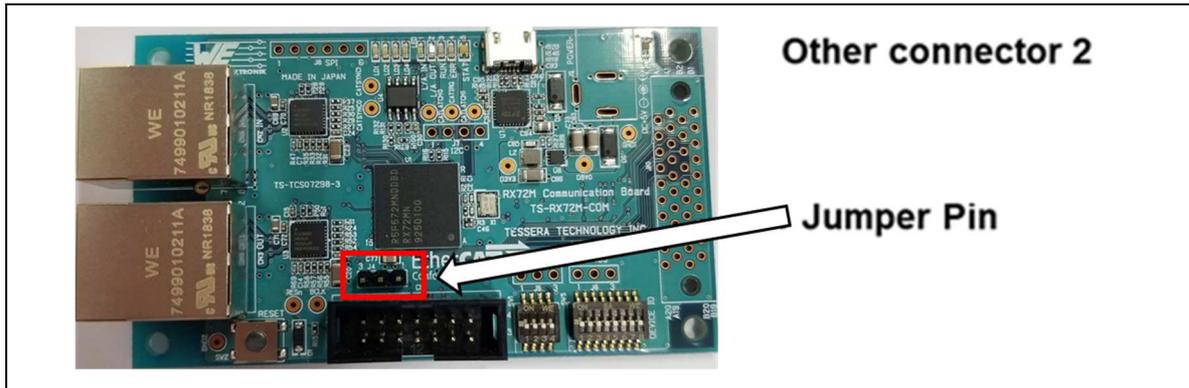

Figure 3.10 Jumper Blocks

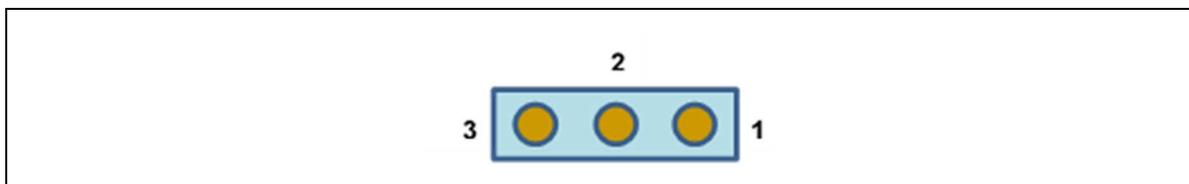

Figure 3.11 Jumper Pin Assignment

Table 3.10 Jumper (J4)

Jumper Pin	Function
1-2	E2 debugging with Hot plug-in
2-3	E2 normal debugging Microcontroller single operation ※Default
open	Do not set

3.9 Combination Connector (J10)

The combination connector is used to connect an external device to the RX72M communications board.

Part No: HIROSE FX2-40P-1.27DSL (71) (Not mounted)

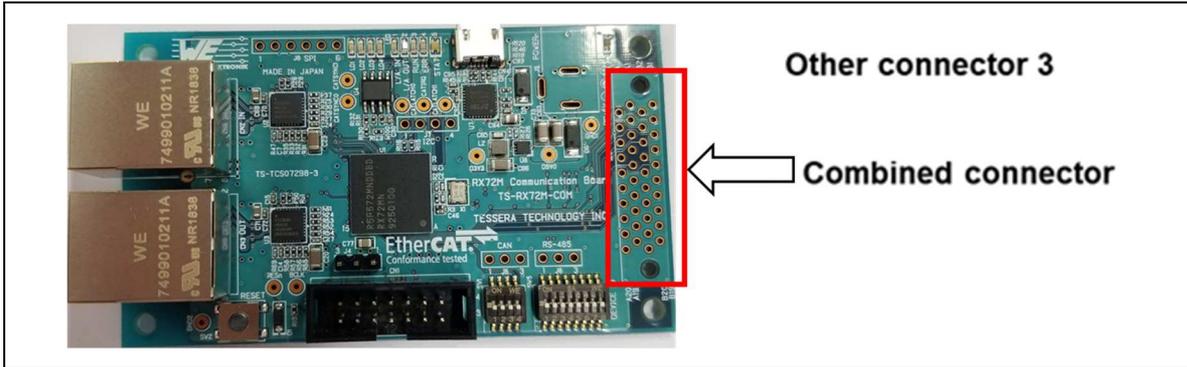

Figure 3.11 Combination Connector

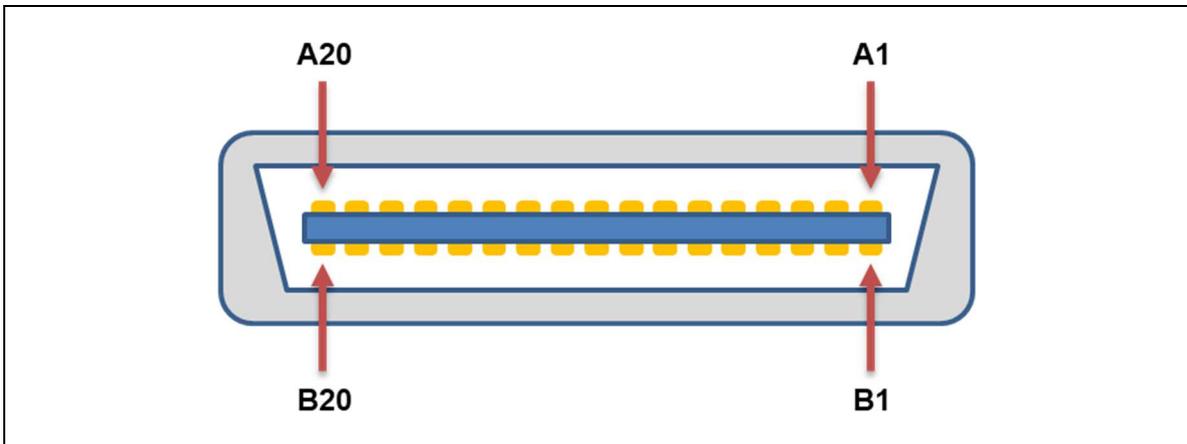

Figure 3.12 Combination Connector Assignment

Table 3.11 Combination connector arrangement (J10)

Pin No.	Name of RX72M Signal	Function	Pin No.	Name of RX72M Signal	Function
